

> MECE Framework is given as follows:

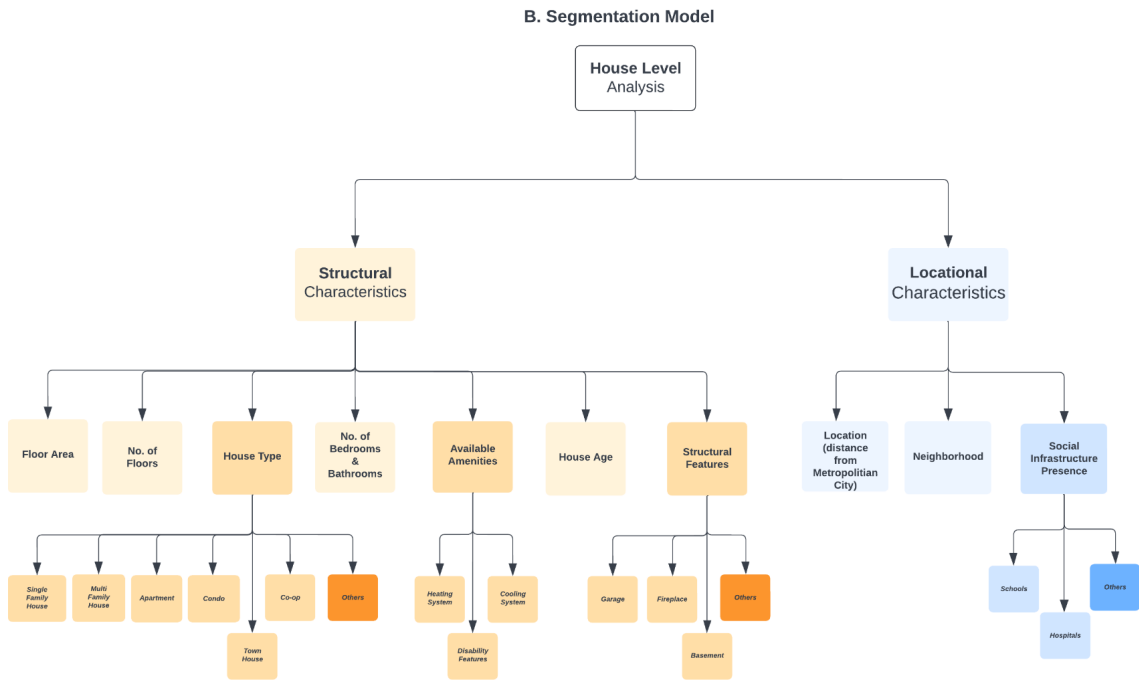

- First, the problem statement was broken down into a conceptual model to figure out the factors involved, where the House Prices were looked at from 3 different levels:
 - House Level concerned with only the structure of the house
 - House Level concerned with the locality of the house
 - National economy level i.e., concerned with macroeconomic factors.
- After the conceptual model, segmentation of each level mentioned above took place.

Question: What are all the factors that could influence the residential home prices across the United States over the next decade?

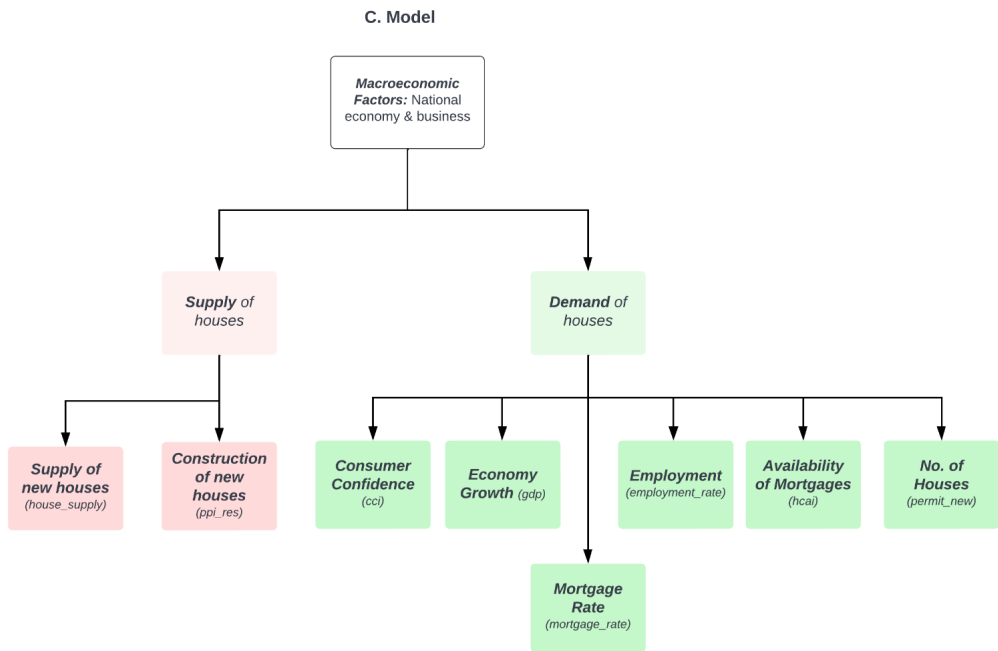

By Faryar Memon

Question: What are all the factors that could influence the residential home prices across the United States over the next decade?

Question: What are all the factors that could influence the residential home prices across the United States over the next decade?

NOTE: The words inside the brackets represent the features of the Macroeconomic factors dataset
